Museo Diffuso

Geographical Information System for cultural and historic heritage

The Province of Naples and the Department of Historic Studies "Ettore Lepore", originating from a previous project "Museo Diffuso" and from a specific Agreement, promote the settlement of a Geographic Information System for the knowledge and the development of local cultural heritage.

Experiments and advanced achievements, both in GIS fields and in the surveying, cataloguing and digitisation, form the basis for this common project.

The project revolves around the establishing of different modules, local databases, starting from an accurate recognition and digitisation of the historical sources. An information retrieval system enables the integration and alignment of these single modules and includes both text and geographical searching.

User friendly interfaces enable the end-user to establish his own personalised cultural tour.

This is an open system with the possibility of hosting selected users' contributions.

e-mail: museodiffuso@provincia.napoli.it

"Museo Diffuso" is a GIS-WEB project which enables the users on a virtual journey through the local cultural heritage from a single point of access.

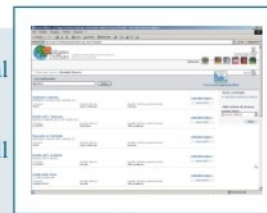

Every cultural object is shown on a map with a specific graphic symbol. All descriptions, images and drawings are linked to this symbol.

Users can visit the entire heritage through five virtual tours: architecture and urbanism, archaeology, nature, mythes and literature, museums.

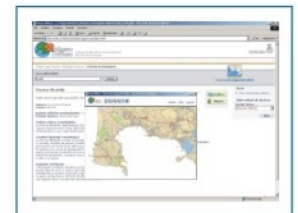

Others tours are based on specific themes: time (historic and artistic periods) and location being the first.

"Museo Diffuso"

Geodatabase of historical, artistic, architectural, archaeological and natural assets

Foriocultura is an open information system.

It was founded through an agreement between the Municipality of Forio and the Department of Historic Studies "Ettore Lepore" - University of Naples Federico II. The project was sponsored by Regione Campania

This database has the aim of retrieving and managing information concerning the cultural heritage of the island, which is often unknown or neglected.

Forio discovers its past. History and tourism a real relation

This project promotes cultural tourism, thus improving the economic development of the area. It is based on a portal, that enables the users to browse through thematic databases about specific fields of research.
